

# **Personal Finance Management app (Fin-Ally)**

**Budget tracking**: Allow users to create a budget plan and track their daily, weekly, and monthly expenses. Provide easy-to-read charts and graphs that show where their money is going.

**Investment tracking**: Allow users to track their investments, including stocks, bonds, and mutual funds. Provide real-time updates on market performance, and allow users to set investment goals and receive alerts when they reach them.

**Bill management**: Allow users to manage their bills, including setting up automatic payments, receiving payment reminders, and tracking payment history.

**Savings goals**: Allow users to set savings goals, and track their progress towards those goals. Provide tips and suggestions for ways to save money.

**Credit score monitoring**: Provide users with real-time updates on their credit score, and provide tips for improving their credit score.

**Personal finance coaching**: Offer personalized financial coaching and advice, including budget planning, debt repayment strategies, and investment advice.

**Expense sharing**: Allow users to split expenses with friends and family, making it easy to manage shared expenses such as rent, groceries, and bills.

**Tax filing assistance**: Provide users with a step-by-step guide to filing their taxes, automatic calculations, and suggestions for deductions and credits.

**Financial news and insights**: Provide users with financial news and insights, including stock market updates, investment trends, and industry news.

**Insurance management**: Allow users to manage their insurance policies, including health insurance, life insurance, and car insurance.

# EV management dashboard (Nav-EV)

**Charging station locator**: An app that helps EV drivers locate charging stations near them. The app should show the location, availability, and pricing of nearby charging stations.

**Charging history**: Allow users to track their charging history and monitor the health of their battery. The app should provide insights and recommendations based on the user's charging habits.

**Range estimation**: Offer users an accurate range estimation based on their current battery level, driving habits, and environmental conditions. The app should also provide suggestions for conserving battery life.

**Charging notifications**: Provide users with notifications when their vehicle is fully charged or when their battery level is low. The app should also offer suggestions for the best time to charge their vehicle.

**Energy usage tracking**: Allow users to track their energy usage and monitor their carbon footprint. The app should provide insights into their energy usage patterns and suggest ways to reduce their environmental impact.

**Trip planning**: Offer users the ability to plan their trips based on their vehicle's range and available charging stations along the route. The app should also provide real-time updates on charging station availability and pricing.

**Maintenance reminders**: Provide users with reminders for regular maintenance, such as tire rotations and oil changes. The app should also offer suggestions for maintenance based on the user's vehicle and driving habits.

**Driving behavior analysis**: Analyze the user's driving behavior, including acceleration, braking, and speed, to provide insights into their energy usage and efficiency. The app should also offer suggestions for improving their driving habits.

**Cost analysis**: Allow users to track the cost of charging their vehicle and compare it to the cost of gasoline. The app should also provide recommendations for the most cost-effective charging options.

**Social features**: Offer users the ability to connect with other EV drivers and share tips and insights on driving and charging their vehicles.
